This document contains information, that is proprietary to the Bio4HUMAN consortium. Neither this document nor the information contained herein shall be used, duplicated, or communicated by any means to any third party, in whole or in parts, except with the prior written consent of the Bio4HUMAN consortium. This restriction legend shall not be altered or obliterated on or from this document. Neither the European Commission nor the Bio4HUMAN project consortium are liable for any use that may be made of the information that it contains.

## Scope:

The annex presents the list of bio-based solutions presented in the D4.1.

## Note:

This list with numbers were used in the Chapter 4, Table 6 "Identified existing solutions to be multiplied". This appendix is intended to assist in the correct reading of the above-mentioned table.

Category	No.	BB solutions to be used	Final product of BB solution or SWM result
Multi purpose packaging products	1	Packaging utilizing Notpla Seaweed / Zero Waste Paper	Delivering boxes of different sizes and functions. By-product from seaweed processing.
	2	MYCO 4Pack and SafePads	Combination of protective mailers with cardboard for protection during transport
	3	Sustainable film concept for medical and food packaging	The optimized high-performance film represents an alternative to cellulose-based films.
	4	LAM'ON – Biodegradable laminating film	Biodegradable laminating film from renewable resources like corn.
	5	Monta Biopack® – self-adhesive tape / monta Klebebandwerk	Sustainable self-adhesive tape. It is made from about 90 % renewable resources.
	6	Sway Polybags	Bags made with with seaweed, plants, and compostable polymers.
	7	Wood Foams utilising the Fibrease® and Papira®	Fibrease® - Composite material, suitable for insulation purposes in medical shipments, life science, meal kit deliveries, transport of light and fragile goods. Papira® - It is suitable for packaging of industrial,

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Research Executive Agency (REA). Neither the European Union nor the granting authority can be held responsible for them.

			electronic and medical equipment, as well as
			fragile goods.
		Lligh barrier and	High barrier packaging materials for semi- liquids,
		High barrier and compostable	dry and dehydrated food.
	8	packaging materials	The solution is utilizing plant-based by-
	0	for food contact	products and waste (industrial waste and
Food and drinks packaging products		applications	agricultural waste) and is based on cellulose
			and bioplastics.
	9	PLA bottles for water	The 100 % (sugar cane) plant-based
		+ Small water bottling unit	composition refers to the whole bottle, incl.
		for blowing and filling	cap and label.
		PLA bottles	The bottle allows for durable applications.
		Anandi 100%	
	10	Compostable Sanitary	Jute, bagasse, banana fibre and water hyacinth
		Pads + Aakar Mini	are used to produce the sanitary pads.
		–Factories	
Hygiene products		NATY Incontinence	Femcare / Inco line with only compostable certified raw plant based
	11		materials,
		Pads	including the individual wrapping and
			packaging.
		KINGSPAN Bio based	The products made from hemp have been
	12	insulation in buildings	developed to help reduce the carbon footprint
			of buildings.
	13	Product lines made from bioPUR	A) KLIMA-PUR Windows: high-performance,
			energy saving windows with frames made from bioPUR
Construction related			(renewable raw materials)
products			B)bioPUR Foams: a diverse range of bioPUR
			insulation foams for roofs, walls, and floors
	14 15		(renewable raw materials)
		Eco-friendly insulation	Sheep wool isolating material. The solution
		with natural sheep's wool	could be applied for insulating roofs, ceilings, walls, floors, doors, windows.
		Weet	Within this project, tent fabrics consisting of
		Biodegradable shelter	fabric material that can be molecularly
			recycled have been developed. The remaining
			layer can be used as fertiliser.
	16	Bio4Pack Waste Bag	Responsible alternative to a disposable bag
		(TIPA)	made from renewable resources. Single use compostable HaPPE apron is made
Other products	17	Single use compostable HaPPE apron	from HaPPE's proprietary resin with neck loop
potentially applicable			and waist ties. Alternative to disposable plastic
in the			medical consumables.
context of	18	Biodegradable containers	The solution refers to biodegradability and
humanitarian interventions			allows the reduction of usage of fossil-based
			materials. Based on biomaterial (maize flour)
	19	Monofilament fishing nets	and biodegradable plasticizer. Monofilament fishing nets are utilising
			biobased
			and biodegradable bioplastic formulations.
	20	Biodegradable and compostable mulching spray	This mulching spray obtained from renewable
			sources prevents the growth of weeds in the
			soil near plants and fruits.
Small – scale	21	Black Soldier Fly (BSF)	Transform local organic waste into high- protein
technologies	21	opportunities	animal feed and fertilizer.
L	I	1	

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Research Executive Agency (REA). Neither the European Union nor the granting authority can be held responsible for them.

22	Small-Scale Residue Utilization Pathways (SSRUP) - Black Soldier Fly technology	The dark cage provided low-light conditions mimicking the flies' natural habitat, while the love cage encouraged mating. Adult BSF are attracted using decomposing organic waste.
23	Modular micro AD system – Qube Renewables	Anaerobic dry digester that provides a cost- effective solution to fibrous agricultural and food waste.
24	Single Stage Biogas Digester	It operates anaerobically to break down organic wastes into usable products – methane gas, water and organic fertilizer.
25	Micro Biogas Digester	small-scale physical installation that is fed with organic waste (food and agricultural / garden waste) to generate biogas energy (for cooking and heating) and to generate fertilisers.
26	Domestic biogas technologies	The technologies are able to utilize fibrous and non-fibrous feedstock, including animal excrements and or vegetable waste.
27	Biogas production from (bio) organic waste	The effect of the final product is the production of biogas from the organic fraction of rural or urban solid waste and the reduction of the dependence of fossil fuel for cooking, lighting and electricity generation.
